

Web Technologies – Assignment#1

Maryam Rashid – FA24-BCS-050

Assignment 1 — Your Personal CV Page

Difficulty: Foundational · **Covers:** Lectures 3–6 (HTML & HTML5, Semantic HTML and Forms, CSS Fundamentals, the CSS Box Model) · **Folder:** assignment-1/

Task: Build a single-page personal CV/résumé as a static HTML + CSS website — no JavaScript, no framework, just semantic HTML5 and hand-written CSS. This is where you prove you actually know the raw building blocks before anything is allowed to hide them from you.

Your page must include, at minimum:

A header with your name, a short professional tagline, and a photo (a placeholder image is fine).

An “About Me” section.

An “Education” section listing your academic history in a semantic list or table.

A “Skills” section.

A “Contact” section with a real `<a href="mailto:...">` link and at least one social/portfolio link.

Correct use of semantic HTML5 elements throughout — `<header>`, `<nav>`, `<main>`, `<section>`, `<article>`, `<footer>` as appropriate, not a page built entirely out of unstyled `<div>`s.

Styling entirely in a separate `styles.css` file (external stylesheet, not inline `style=""` attributes) using the box model correctly — sensible margins, padding, and borders, not everything jammed against everything else.

Maryam Rashid

BS Computer Science Student

About Me

I'm a 5th semester Bachelor's Computer Science student with a strong interest in software and web development. I enjoy learning new technologies and solving problems.

Education

Bachelor's in Computer Science

Comsats University Islamabad, Lahore Campus

A-level

The City School, Faisalabad

Projects

JavaFX Pet Simulation Application | Object-Oriented Programming Project

Developed a desktop pet simulation application in Java utilizing JavaFX for the graphical user interface.

Music Player desktop Application | Data Structures and Algorithm Projects

Built an offline music library and playback application in Java featuring custom playlist management.

Skills

Java
C++
HTML
CSS
JavaScript

Git
Node.js
Express
JavaFX
